

Safety Awareness

Aims

To ensure that employees' actions contribute to health and safety in the workplace and that they understand their individual responsibilities.

Objectives

At the end of the one day course each delegate should be able to:

- Understand the need to work safely, not to put others at risk
- Define the terms hazard, risk and risk controls
- Explain the importance of risk assessment
- Appreciate the role of workplace precautions
- Describe a health and safety management system
- Identify lines of health and safety communication and safety signs and signals
- Be aware of emergency and accident plans in their workplace
- Know how and to whom to report accidents, incidents and near misses
- Be aware of how industry affects the environment and list the ways in which individuals can minimise pollution and waste

Programme summary

Introducing working safely

Why it is important to work safely. Moral, legal and economic duties

Defining hazard and risk

What kind of things can cause you and others harm. What is risk? How can risks be controlled. How do you decide what to do about risks?

Identifying common hazards

What are the common hazards? What can be done about them?

Improving safety performance

How does an organisation improve safety? What are an individual's and organisation's responsibilities. How is safety measured?

Protecting your environment

How does industry affect the environment? What can an organisation do to reduce pollution and waste. What can an individual do to reduce pollution and waste?

All delegates will receive a certificate of attendance

Client specific process and procedures can be used throughout this session.
